

Break the monopolistic hold of the NAB on what runs through America's airwaves. XM and Sirius Satellite radio services offer a valuable alternative to ordinary, repetitive, out of touch radio. The entire point of a free market economy is to allow for competition and growth within certain markets. Clearly the NAB is trying to undercut this process by bullying new, and arguably better, entrants from improving on the shotty job they have done for years. It would be criminal to support the NAB in their proposal. Do the NAB, the economic process and ultimately the American people an enormous favor by striking down the proposed restrictions.
